Enriched Air Nitrox Diver

FEW THINGS have revolutionized recreational diving in the past decade as much as the introduction of Enriched Air Nitrox (EANX). Nitrox is nothing more than the air you are breathing right now with some additional oxygen added to reduce the concentration of nitrogen. While the additional oxygen offers no benefit in and of itself (and can, in fact, pose additional risk at depth), breathing less nitrogen provides divers with several benefits. Among them:

- You enjoy longer no-decompression limits — especially on repetitive dives.
- You reduce the risk of decompression sickness compared to making the same series of dives using air.
- Further benefits may include improved gas consumption, reduced fatigue and an overall feeling of well being.
- If you own a modern dive computer, odds are it is capable of tracking your exposure to both air and Nitrox. Isn't it time you started taking advantage of your computer's capabilities?

2019 Dates, Times and Places

Prerequisite	Open Water Diver	
Classroom	One Thursday Evening	6:30 PM-9:30 PM

AVAILABLE DATES	
Classroom	Open Water
January 10	Not Required
March 14	Not Required
May 9	Not Required
July 11	Not Required
September 12	Not Required
November 14	Not Required

Not able to make one of our scheduled classes, just let us know and we will work out a date for you.
